

CYBER SECURITY

WEB APPLICATION FIREWALL & DDOS PROTECTION

SPAMMERS, DATA BREACHES, DDOS?
ALWAYS STAY ONE STEP AHEAD.

Benefits:

1.

Cloud-based best-in-class web application security platform

2.

Globally distributed Cloud infrastructure with strategically distributed SuperPOPs

3.

Mitigate complex application-layer attacks using sophisticated algorithms

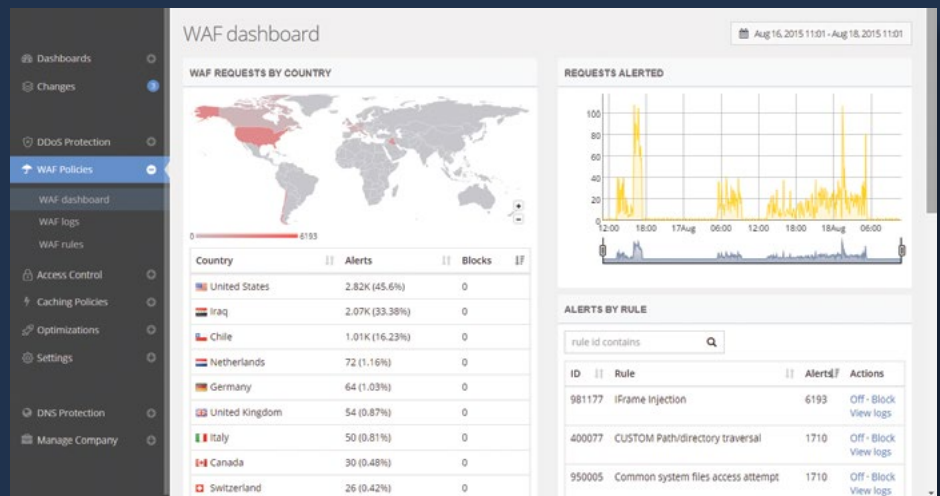

4.

White-glove managed service with 24x7 Security Operations Centers

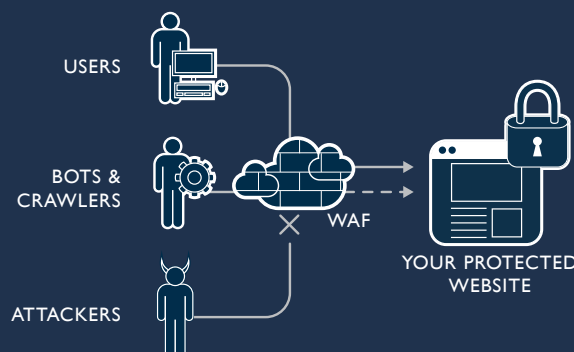

5.

Cybersecurity experts at your disposal for real-time mitigation of attacks

Protect yourself against ever more sophisticated attacks with our best-in-class, always-on solutions. With instant threat updates across all Points of Presence and constant monitoring of the Dark Web plus threat intelligence by our cybersecurity teams, you can be sure your protection is solid and scalable – at a very competitive price.

With the help of our experts and the 24x7 Security Operation Center, you can constantly analyze your vulnerability and mitigate threats with a high degree of customization. Configurable rule sets mean you can adjust your security posture, monitor suspicious traffic and respond to threats with ease.

Our Web Application Firewall (WAF) identifies and filters traffic from multiple locations and only lets legitimate requests through.

CYBER SECURITY AT THE EDGE OF THE NETWORK

LeaseWeb secures your web sites and applications
at the edge of the network – away from your data center perimeter

THREAT INTELLIGENCE AND PROTECTION

- DDOS attack protection at layer 3/4 such as SYN Floods, ICMP Floods, SMURF, DNS Amplifications, etc.
- DDOS attack protection at layer 7 with IP rate limiting, CAPTCHA, JS challenge series, Botnet signature detection, etc.
- Web Application Firewall security policies to protect against most sophisticated attacks such as injections, cross site scripting, invalid redirects and forwards, etc.
- Rules customization to any specific environment

SECURITY OPERATIONS CENTER

- 365x24x7 SOC reacts to any incoming attack and controls mitigation procedures
- Formal and detailed attack report delivered after each attack

INDUSTRY'S BEST SECURITY DASHBOARD

- Views for blocked or suspicious traffic, top malicious IPs and geographies
- Capability to dive deeper into a specific IP, data range or rule set
- Configurable dashboard lets you download and share metrics
- Intuitive navigation on graphs

REPORTS – MANAGE AND SHARE RESULTS

- WAF attack logs and correlated web application request logs
- Manage, save and share reports and graphs
- Or download to common format files (Excel, csv, txt)

FULLY ACCESSIBLE VIA API

- Use our REST API to integrate resources into your own applications
- Integrate the information into your existing dashboard, NOC or SIEM of choice
